### Function

The Big Bag Emptier is an emptier where the big bag by means of suitable lifting equipment is lowered down over the emptier and thereby the bag will be cut up in the bottom by pointed knives.

On the upper side there is a rubber cuff, which is shaped in accordance with the bag and therefore gives a dust-tight connection.

### Standard of equipment

- Support legs with rubber dampers for suspension
- Vibrating motor 230/400 V, 50 Hz, 600 W
- Outlet connection NV 250/PN10
- Suitable for big bags with diameter 1100 or smaller
- Manufactured in normal steel and surfaced according to Scanmatic standard painting program

### Optional equipment

- |   |          |
|---|----------|
| - Double rubber cuffs to avoid dust   | P-500701 |
| - Centered arms to fixate the big bag   | P-500702 |
| - Broadened knife for wider cutting of the big bag                                | P-500703 |
| - H-knife for alternative cutting of the big bag                                  | P-500704 |
| - Hatch in the emptier funnel   | P-500705 |
| - Lifting device for lifting with electric telpher                                | P-500706 |
| - Extended lifting device for lifting with fork truck                             | P-500707 |
| - Stand for electric telpher  | P-500708 |
| - Fluidization to prevent arching in the emptier funnel                           | P-500709 |
| - Platform with stairs  | P-500710 |
| - Bag storage rack where forklift leaves the yoke with the hanging bag at the top | P-500711 |
| - Grating in the outlet   | P-500712 |
| - Yoke 500 kg   | P-500713 |
| - Yoke with stand for fork lift   | P-500714 |

### Special

The Big Bag emptier can also be manufactured for other dimensions of the big bag, other outlet connection and in other materials e.g. stainless steel.

The knife cross is demountable and easy to adjust to get a wider cut.
